

Why make the leap to wireless connectivity?

Nowadays, everybody is looking for a way to improve their teams productivity and time management, but few actually have the means to do it.

That's why Probewell continuously develops advanced technologies in parallel with the utility industry's ever-changing requirements.

Probewell socket-type wireless field testers are the baseline for utilities looking to minimize risk while enhancing their productivity and profitability on the go.

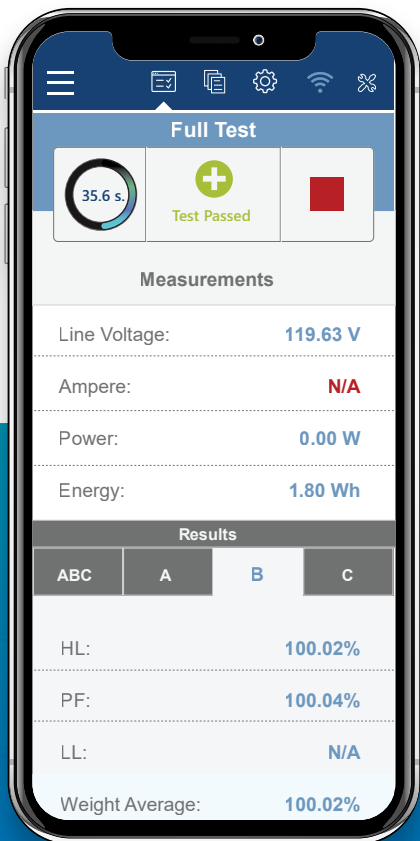

MT-1/WT3 ▶

Leverage proven wireless technologies to streamline your testing process and make smarter, data-driven assessment and recommendations.

When replacing an older device for a wireless one, of course, you will save money with the trade-in program, but there are **more savings to consider**:

- WT Series devices are highly versatile and compatible, therefore enabling you to do more by **expanding your testing capacities**.
- The WT Series has a **low-cost implementation** because it makes use of familiar mobile technology that everyone already has in their pocket, thus **reducing the learning curve**.
- **Save time** by speeding up the overall process with automation and spend less time doing clerical work and redundant back-office tasks.
- Get **actionable insights** to enable fast, effective response and maximize productivity.
- The WT series is a mature product line used by key players in the utility industry and proven in the field over the years, making it a **low-risk investment**.

Data-driven assessment at your fingertips with the Probewell Connect 2.0 application on your mobile device.

Whether it's responding to a high bill complaint or performing a routine inspection to keep your facilities running at peak performance, Probewell's innovative, lightweight products simplify the testing process with its advanced yet intuitive user interface.
